

National EAS and WEA Test

IPAWS National Test

- The Federal Emergency Management Agency (FEMA), in coordination with the Federal Communications Commission (FCC), will conduct a nationwide test of the Emergency Alert System (EAS) and Wireless Emergency Alert (WEA) system on September 20, 2018.
- The test will assess the readiness to distribute an emergency message nationwide and determine whether improvements are needed.
- The test messages will be sent using FEMA's IPAWS, which enables authorities to send emergency messages to multiple communications networks, including the EAS and WEA as part of the nation's modern alert and warning infrastructure.
- Sending the WEA test message will begin at 2:18 p.m. EDT. The EAS message will be sent at 2:20 p.m. EDT.
- This will be the first nationwide Presidential-level WEA test and cannot be opted out.
- In the event of unforeseen circumstances, such as a major weather event, the backup date for the IPAWS National Test is Wednesday, October 3 at 2:20 p.m. EDT.

Wireless Emergency Alert (WEA) Test

- Cell towers will broadcast the WEA test for approximately 30 minutes beginning at 2:18 p.m. EDT. **During this time, WEA-compatible cell phones that are switched on and within range of an active cell tower, and whose wireless carrier participates in WEA, should be capable of receiving the test message.** Cell phones should receive the message only once.
- The WEA test message will be a Presidential Alert and will read:
"THIS IS A TEST of the National Wireless Emergency Alert System. No action is needed."
- WEA messages are sent by public safety officials to warn the public about dangerous situations in

Example of a cell phone displaying the WEA test message

other critical emergencies. The national test will use the same special tone and vibration as with all WEA messages (e.g. tornado warnings and AMBER Alerts).

Emergency Alert System (EAS) Test

- The EAS test message is distributed to radio and television broadcasters, cable systems, satellite radio and television providers, and wireline video providers.
- The test message will be similar to regular monthly EAS test messages with which the public is familiar and interrupts programming for approximately one minute.
- The EAS message will read:
"THIS IS A TEST of the National Emergency Alert System. This system was developed by broadcast and cable operators in voluntary cooperation with the Federal Emergency Management Agency, the Federal Communications Commission, and local authorities to keep you informed in the event of an emergency. If this had been an actual emergency, an official message would have followed the tone alert you heard at the start of this message. A similar Wireless Emergency Alert test message has been sent to all cell phones nationwide. Some cell phones will receive the message; others will not. No action is required."

Frequently Asked Questions

What is the Integrated Public Alert and Warning System (IPAWS)?

IPAWS is a national system for local alerting. It provides the means for disseminating authenticated emergency alert and warning messaging from emergency officials to the public through:

- Radio and television via EAS;
- Wireless phones via WEA;
- NOAA All Hazards Weather Radio via IPAWS-NOAA gateway; and
- Internet applications and websites via the IPAWS Alerts Feed.

Why does the FEMA IPAWS program conduct national tests of public alert and warning systems?

The IPAWS Modernization Act of 2015 (Public Law 114-143) requires the FEMA IPAWS Program Management Office (PMO) to conduct, not less than once every three years, a nationwide test of the public alert and warning system. The Act, which became law in April 2016, requires FEMA to help ensure that under all conditions the President, Federal agencies and state, local, and tribal, governments can alert and warn the civilian population in areas endangered by natural disasters, acts of terrorism, and other man-made disasters or threats to public safety.

The IPAWS PMO, in coordination with the FCC, tests the IPAWS emergency communications pathways — including the Emergency Alert System and Wireless Emergency Alerts.

Why is FEMA conducting a joint EAS and WEA test?

The nationwide EAS and WEA test will provide FEMA with valuable information on the capabilities to distribute a national emergency message. In the event of a national emergency or disaster, WEA and EAS are just some of the channels that will be used to warn the public and communicate what protective action to take. Successful alerting requires using multiple channels to ensure the largest portion of the public possible receives an alert.

Does a member of the public sign up for WEA alerts?

No, one of the significant benefits of WEA is there is no need for a person to sign up to receive a WEA alert. More than 100 carriers, including the largest carriers, participate in the WEA program.

Why will some phones receive the alert and others will not?

Only WEA-compatible cell phones that are switched on and within range of an active cell tower, and whose wireless carrier participates in WEA will be capable of receiving the test message.

How will I know the difference between a WEA and a regular text message?

WEA includes a special tone (some describe it as quite loud) and vibration, both repeated twice. A distinctive WEA message dialog box also appears on the mobile device's screen.

What language will the WEA test message be in?

WEA currently only supports messages in English. The IPAWS can deliver emergency message content in multiple languages and is working with private-sector systems to support delivery of messages in more languages in the future.

What efforts is IPAWS pursuing to make the test message more accessible?

IPAWS is exploring several initiatives to make national tests more widely accessible to those with access and functional needs and limited English proficiency. FEMA is working with public- and private-sector organizations to make alert dissemination more effective, inclusive, and resilient.

When was the most recent nationwide EAS test?

The most recent EAS test was conducted on September 27, 2017. The two EAS national tests held before this were in September 2011 and September 2016.

Will the test alert be used to gather my private data?

No. Both EAS and WEA are broadcasts and do not collect any of your data. This test is strictly a test designed to evaluate the effectiveness of distributing an emergency alert nationwide.
